

Corinex MDU Installation Training

Do you want to diversify in a challenging economy?

Would you like to learn how to deploy FAST, cost effective networks using Powerline and coaxial cable infrastructures?

Become a Corinex Certified System Integrator enabling you to purchase hardware at significant discounts for far greater PROFIT MARGINS?*

This course enables just that.

Who are Corinex Communications?

Corinex Communications specialise in developing high speed IP communication systems that run over electrical wiring (Powerline), coaxial cables, or phone line communications over AnyWire™. Corinex have 8 years of experience developing and deploying networking products and services for the largest Telecom, Utility, and System Integration companies around the world.

Who are Nexus Globalnet?

Nexus Globalnet are the UK distributor for Corinex products and are hosting a 2 day training event taught by Senior Corinex Technical Trainers, to become a Corinex Certified System Integrator.

What is BPL?

Broadband Powerline technology can be challenging to deploy in Multiple Dwelling Units (MDUs) without the proper knowledge. Let Corinex engineers train you on deploying Corinex technology in large and small MDUs using Powerline (AV200 Powerline Ethernet Adapter), coaxial (AV200 CableLAN Adapter), and multiphase Powerline (MDU Gateway) technology. Learn how to maximise throughput across all areas of deployment.

What's included:

- 2 day training course taught by a Senior Corinex Trainer
- First nights accommodation
- 2 days breakfast and lunch. Please specify any dietary requirements when booking
- Complimentary tea and coffee

Course content:

During the training you will learn:

- All aspects of deploying Corinex technology (Powerline and coaxial)
- How to design a Powerline network for all types and sizes of MDUs
- How to use Corinex Frequency Notching software to adhere with government regulations and changing environmental conditions
- Frequency sharing and power reduction modes
- Using multiple phases to maximize bandwidth
- Using Powerline devices to repeat/extend networks
- Managing and configuring a Powerline network (software management)
- How to deliver broadband, streaming video, or VoIP coverage in an MDU
- Setting up VLANS and providing client isolation
- Different methods of providing a backbone (Powerline, coax, Ethernet)
- How to combine Corinex CableLAN and Powerline technologies

Prerequisites:

Basic network knowledge

Date and Location:

March 29th-30th Best Western Ivy Hill Hotel, Chelmsford, Essex

Course fee:

£900.00 ex VAT
